Description of The Development Environment

Mailbag Application Client

1. The version of Node.js: v16.16.0
2. The browser used to test: Chrome, 106.0.5249.119(arm64)
3. Operating system: macOS Monterey, version 12.6 (21G115), Darwin(21.6.0)

4. A short description of how to test the code:
 - ✧ Open Visual Studio and open **m7_mailbag_client** file
 - ✧ Type in correct server address and user email information in **config.js** file.
 - ✧ **Run server** of module 6.
 - ✧ Open client/dist/**index.html** file with **live server** (Chrome)
 - ✧ Then you can see the User Interface, and interact with it by click button or type in text.

5. A short description of how AJAX helps your web application:
 - ✧ Server traffic can be reduced and speed increased. AJAX's primary advantage is its ability to improve performance and usability for web application. AJAX allows applications to render with no data. This reduces server traffic. Web developers can reduce the time taken to respond on both sides of the request.
 - ✧ Enable asynchronous calls. AJAX lets its users make asynchronous calls without having to reload the entire web page. Lazy loading allows users to load only the necessary sections and delay loading the rest until they are needed, which improves the page's load time and also increase conversion rates.
